

# Ecosystem based Disaster Risk Reduction Approaches, Tools, and Networks

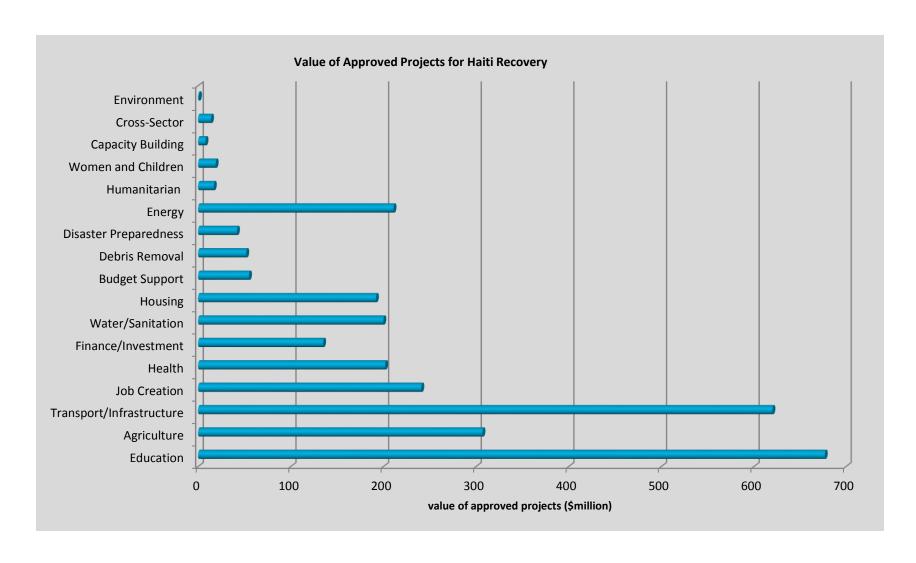

Radhika Murti
Senior Programme Coordinator
International Union for Conservation of Nature
Headquarters, Switzerland

## Defining Ecosystem Based Disaster Risk Reduction

## Story of Haiti

#### Disasters and Climate Change

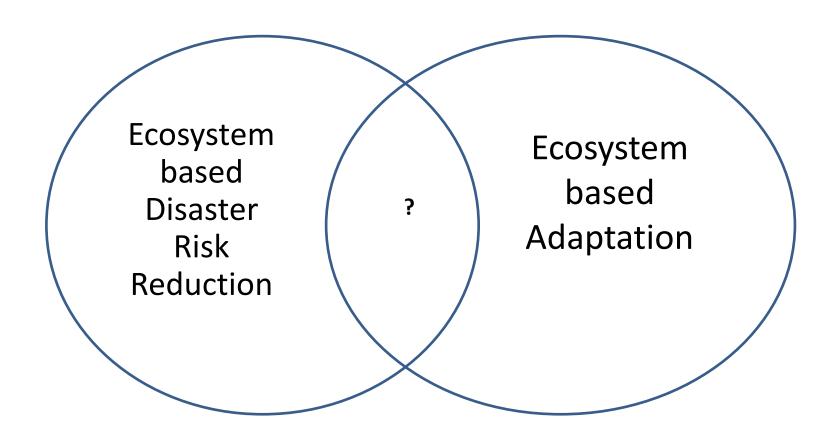

Disasters are increasing in magnitude and frequency

Weather variability brings about new/sudden challenges

 Pre-disaster conditions determine extent of impact and these conditions are affected by climate change effects

# Maximising Impact, Today and Tomorrow

#### Why Integrated Approaches for DRR and CCA?

#### DRR

continues to be reactive

preparedness continues to focus on preparing for the looming disaster NOT on reducing risks, including underlying risks

Response and recovery do NOT focus on building back better

Slow onset hazards are often overlooked/under-resourced

#### CCA

proactively focuses on future

CCA focuses on reducing longer term underlying risks to cope with future changes

Principles of climate resilient development and planning can facilitate building back better

Provides an opportunity to reduce the risks of slow onset hazards

#### Why Integrated Approaches for DRR and CCA?

#### **DRR**

Focuses on hazard management

DRR provides a concrete entry point, despite uncertainties surrounding CC

These mechanisms exist in DRR, much to learn from

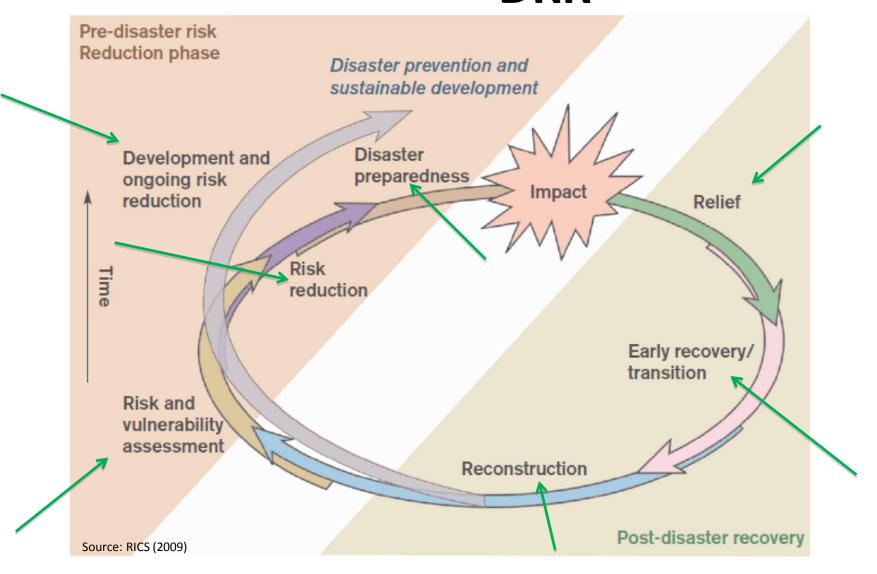

#### CCA

Does not take into account immediate and short term hazards

May find it challenging to convince key stakeholders to invest in CCA

Establishing local to global policy, practice and funding mechanisms

# Entry points for Ecosystem based DRR

#### **IUCN** Tools and Approaches for Eco-DRR

DRR cycle	The role of ecosystems	Tools employed by ecosystem managers		
phase		that can contribute to DRR		
Risk &	Risk & Vulnerability assessment	Qualitative (Participatory process):		
Vulnerability	methods can:	• CREATE;		
assessment	<ul> <li>help identify people's exposure to</li> </ul>	• CRiSTAL;		
	potential natural hazards;	<ul> <li>CARE's Community Vulnerability</li> </ul>		
	<ul> <li>identify the root causes of the</li> </ul>	Capacity Assessments (CVCA)		
	hazard and whether they are	<ul> <li>UNDP Vulnerability Assessment</li> </ul>		
	related to Environmental	Guidance;		
	Management;			
	<ul> <li>Consider environmental</li> </ul>	Quantitative:		
	dimensions or drivers of	<ul> <li>IUCN Redlist of Ecosystems;</li> </ul>		
	vulnerability: Extent, quality	• UNEP RiVAMP - quantifying the role		
	and/or usage of natural resources	of ecosystems for mitigating impacts		
	and ecosystems;			
	<ul> <li>Assess risk of ecosystem collapse.</li> </ul>			
	<ul> <li>Quantify the role of ecosystems</li> </ul>			
	for mitigation.			
		Murti and Buyck (2014)		

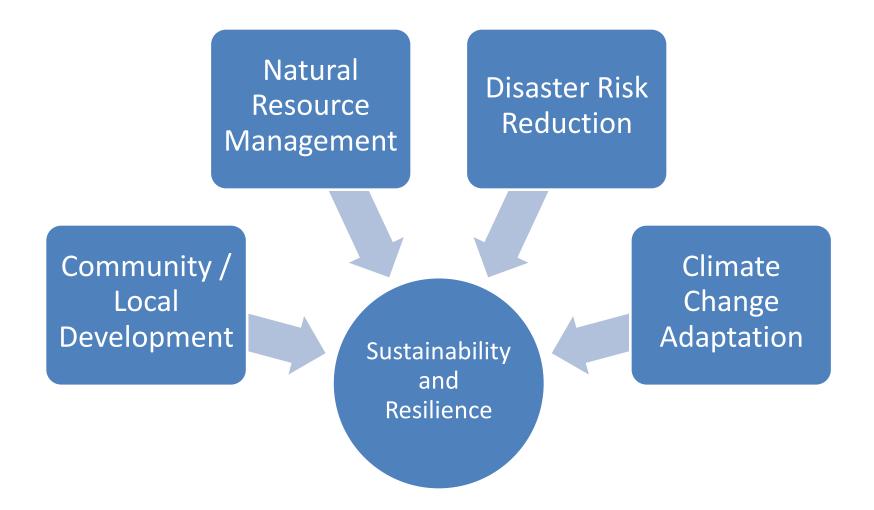

## Climate Resilience Evaluation for Adaptation Through Empowerment (CREATE)

- Starting point for Eco-DRR initiatives
- Social vulnerability assessment process, qualitative
- Integrates common VCA methods (CARE, UNDP, CEDRA) with adaptive capacity assessments
- Facilitates solution finding by communities according to the adaptive capacities
- Prioritises local innovation technological, knowledge, traditional practice to respond to risks and CC impacts

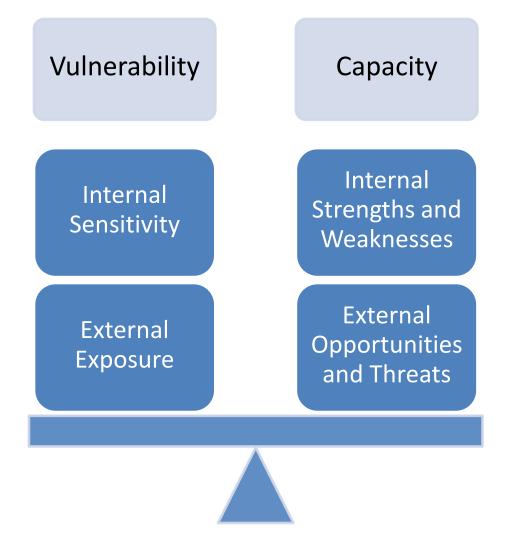

#### Stakeholder groups

community	<ul> <li>equal representation of men and women</li> <li>representative number of elderly for focused group on elderly (historic mapping of climatic changes)</li> <li>representation of youth/young community leaders (potential)</li> </ul>
government	<ul> <li>Local extension officers who work with the community in the long term</li> <li>Teachers from local school, healthcare professionals</li> </ul>
Non-Government	<ul> <li>Local NGO with long term presence and work in the community</li> <li>Religious/respected leaders of faith</li> <li>Existing women's club, youth group, farmer association, etc., - formal or informally recognised</li> </ul>
Private sector	<ul> <li>Local small holder businesses – tourism, livelihoods, etc.,</li> <li>National or multi-national companies working on infrastructure development, mining, fisheries, etc.,</li> <li>Community based cooperative businesses</li> </ul>

### Vulnerability and Capacity

### **IUCN** Redlist of Ecosystems

- Need for an integrated risk assessment tool to:
  - Complement information about risks to species
  - Strengthen conservation messages & action
  - Show that ecosystem loss & degradation can precede species loss (e.g. extinction debt)
- Addresses ecological processes (implications for ecosystem services to humans)
- Addresses dependencies & interactions among species & ecosystems
- Tool to promote conservation & land/water action

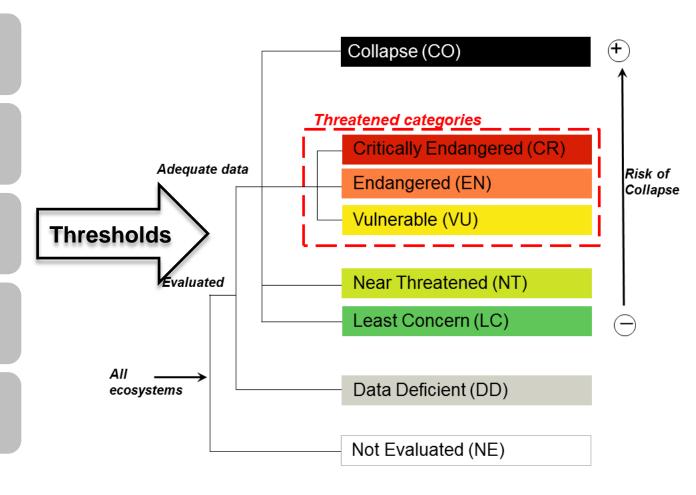

### Risk of ecosystem collapse

#### **Criteria**

#### **Categories**

- A. Declining distribution
- B. Restricted distribution
- C. Degradation of abiotic environment
- D. Altered biotic processes & interactions
- E. Quantitative risk analysis

## "Risk Assessment" Potential for Application, Use & Integration

- 1. Climate change adaptation
- 2. Disaster Risk Reduction
- 3. Impacts of land use change (e.g. conversion, degradation) on e.g. food security, sustainable resource management at different scales
- 4. Invasive species management
- 5. Integrated conservation data for decision-making (RLTS, PAs, KBAs)
- Tool to engage with finance & planning monitoring interventions (repeat RLE – Climate change, Aichi, SDGs, PA Management) & development planning
- 7. Systematic assessment of ecosystem/social interface → more comprehensive picture of drivers/dynamics

#### **Tools and Approaches for Eco-DRR**

Disaster Risk
Reduction
and
preparedness

- Vegetation for stabilizing slopes;
- Wetlands & floodplains to control floods;
- Mosaic landscape for fire management;
- Vegetation management for drought resilience;
- Mangroves, saltmarshes and sand dunes as buffers from i.e. storm surges;
- Provide climate change mitigation.

- Integrated Coastal Zone
   Management;
- Integrated Water Resource
   Management (IWRM);
- Integrated Fire Management;
- Protected Area Management;
- Community-based Natural Resource Management

# Integrated Water Resource Management for DRR

## Integrated Water Resource Management –

A process which promotes the coordinated development and management of water, land and related resources in order to maximize the resultant economic and social welfare in an equitable manner without compromising the sustainability of vital ecosystems<sup>1</sup>

#### Disaster Risk Reduction (HFA) -

The substantial reduction of disaster losses in lives and in the social, economic and environmental assets of communities and countries<sup>2</sup>

# Integrated Water Resource Management for DRR

Pillars of IWRM			Strategic Goals of HFA			
Enabling Environmen t	Institutional Framework	Management Instruments	Integration of disaster risk into sustainable development policies and planning	Development and strengthening of institutions, mechanisms, and capacities to build resilience to hazards	Incorporation of risk reduction approaches into implementation of emergency preparedness, response, and recovery programs	

Utilizing Integrated Water Resource Management Approaches to Support Disaster Risk Reduction

James Dalton, Radhika Murti, Alvin Chandra (2013)

# Integrated Water Resource Management for DRR

Designation of green areas that may be seen as development prospects

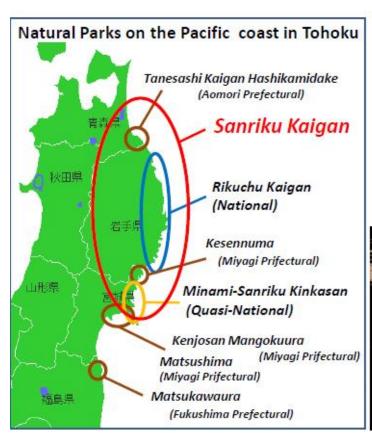

Integration of DRR into current PA management system

Extending existing PAs to cover highly vulnerable areas

Haiti – First country to designate a Marine Protected Area for Disaster Risk Reduction, recognising its multiple benefits such as biodiversity recovery and livelihood security (2014)

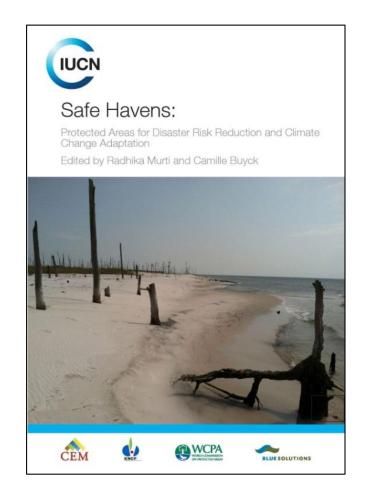

#### Japan - Sanriku Reconstruction National Park

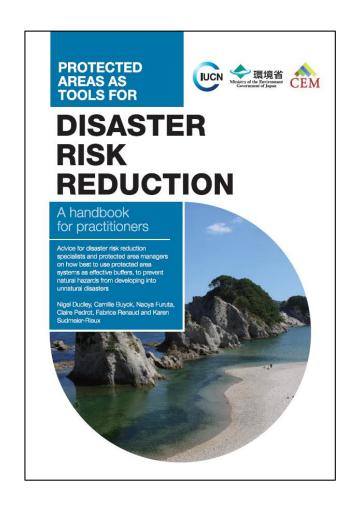

## Protected Area Management for DRR

### Keeping in Touch

 Build a network of champions, people willing and committed to change business as usual

 collaborations, joint trainings, implementation opportunities, joint voices at key events

Learning together
